Course Overview

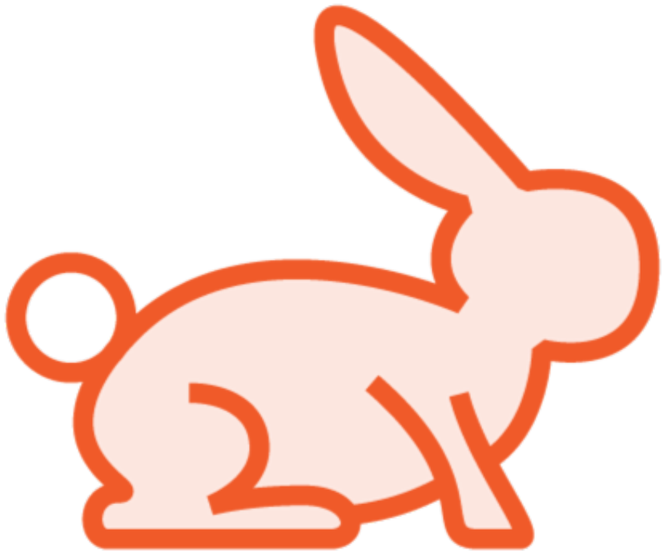

Evolving Your Project Methodology

Creating Value in Project Environments

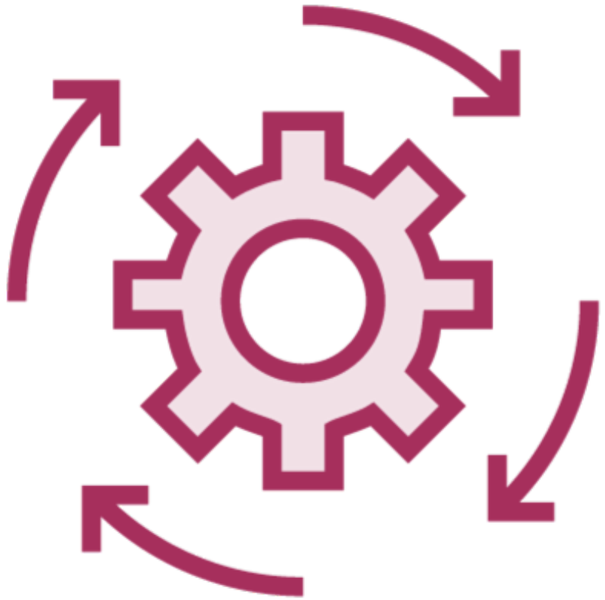

Creating and Serving in High Performance Teams

Agile Principles in Project Environments

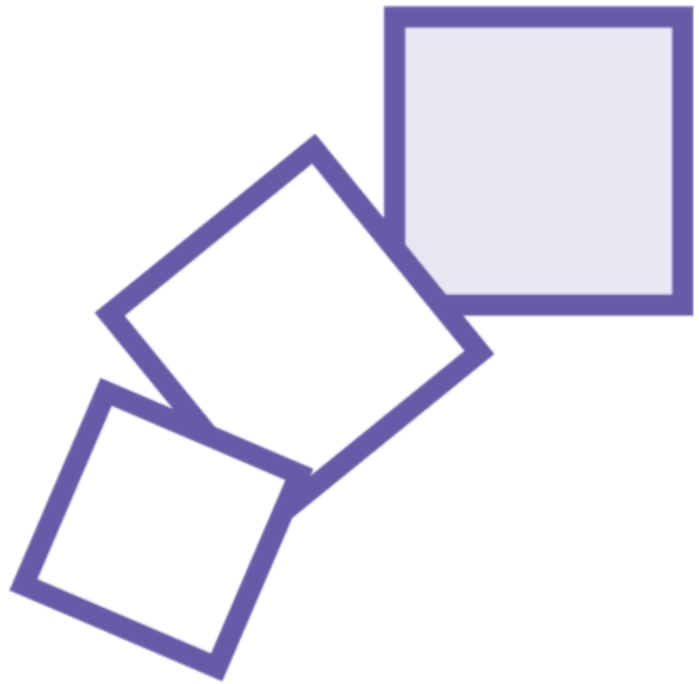

The Secret to Successful Projects

Processes and Agile Project Management

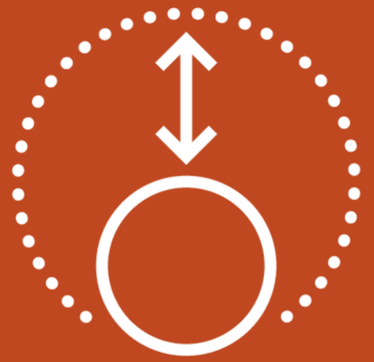

Leveraging Change in Agile Projects

Agile Principles in Project Environments

Projects

Drive organizational change and growth

Create new value

Facilitate experimentation and innovation

Infusing Agile Principles

Begin work more quickly

Adapt to changing conditions midstream

Harness learning to refine objectives

Adjust to stakeholder feedback

Drive organizational change and growth

Create new value

Facilitate experimentation and innovation

Infusing Agile Principles

Deliver utility sooner

Capitalize on limited time opportunities

Limit waste and optimize resource usage

Drive organizational change and growth

Create new value

Facilitate experimentation and innovation

Infusing Agile Principles

Small increments cap the risk involved in trying something new

Resources may be reallocated quickly to leverage innovations

Limited exposure affords greater risk tolerance

Drive organizational change and growth

Create new value

Facilitate experimentation and innovation

The Secret to Successful Projects

Projects

Processes

Results

Projects

Who am I working with?

What values do we share?

What are we trying to achieve?

Why does our shared mission matter?

What can I share and what can I learn?

How can we work together effectively?

Definers

Doers

Remove barriers between planning and execution

Project Team

Important Project Relationships

Organizational Colleagues

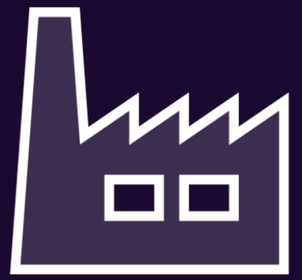

End Users

Customers

Vendors

Partners

Stakeholders

Processes and Agile Project Management

Utilizing Processes

Processes may have been in place longer than anyone interfacing with them

Best practices evolved from mistakes and periods of optimization

Not every wheel needs to be reinvented

Is the process serving you, or are you serving the process?

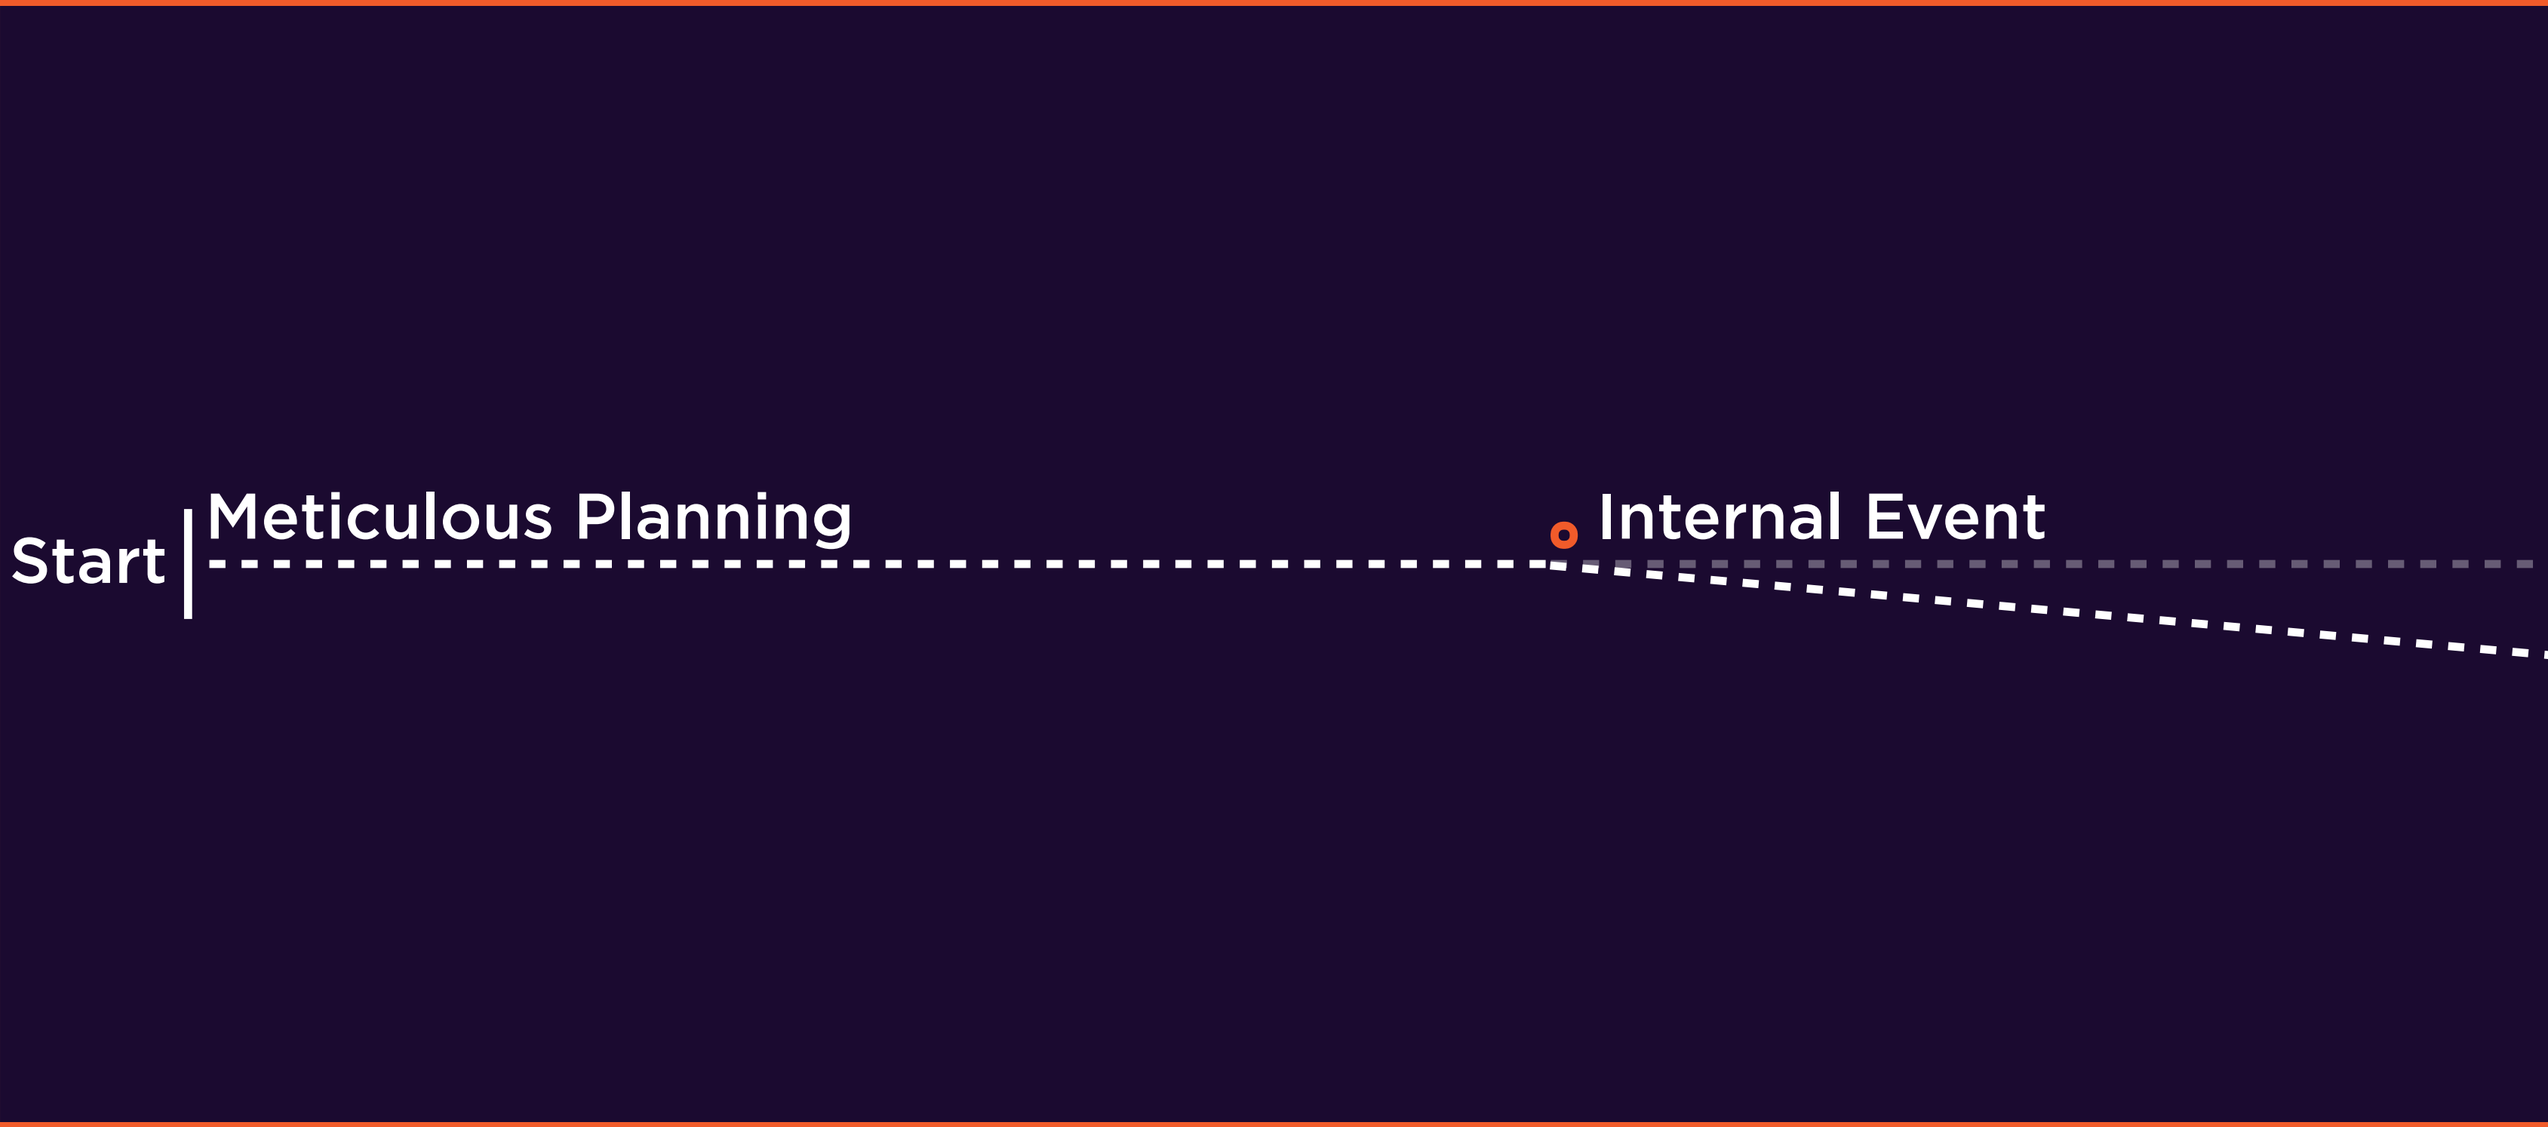

Are you unable to complete an objective or serve a customer as you'd like because of a process?

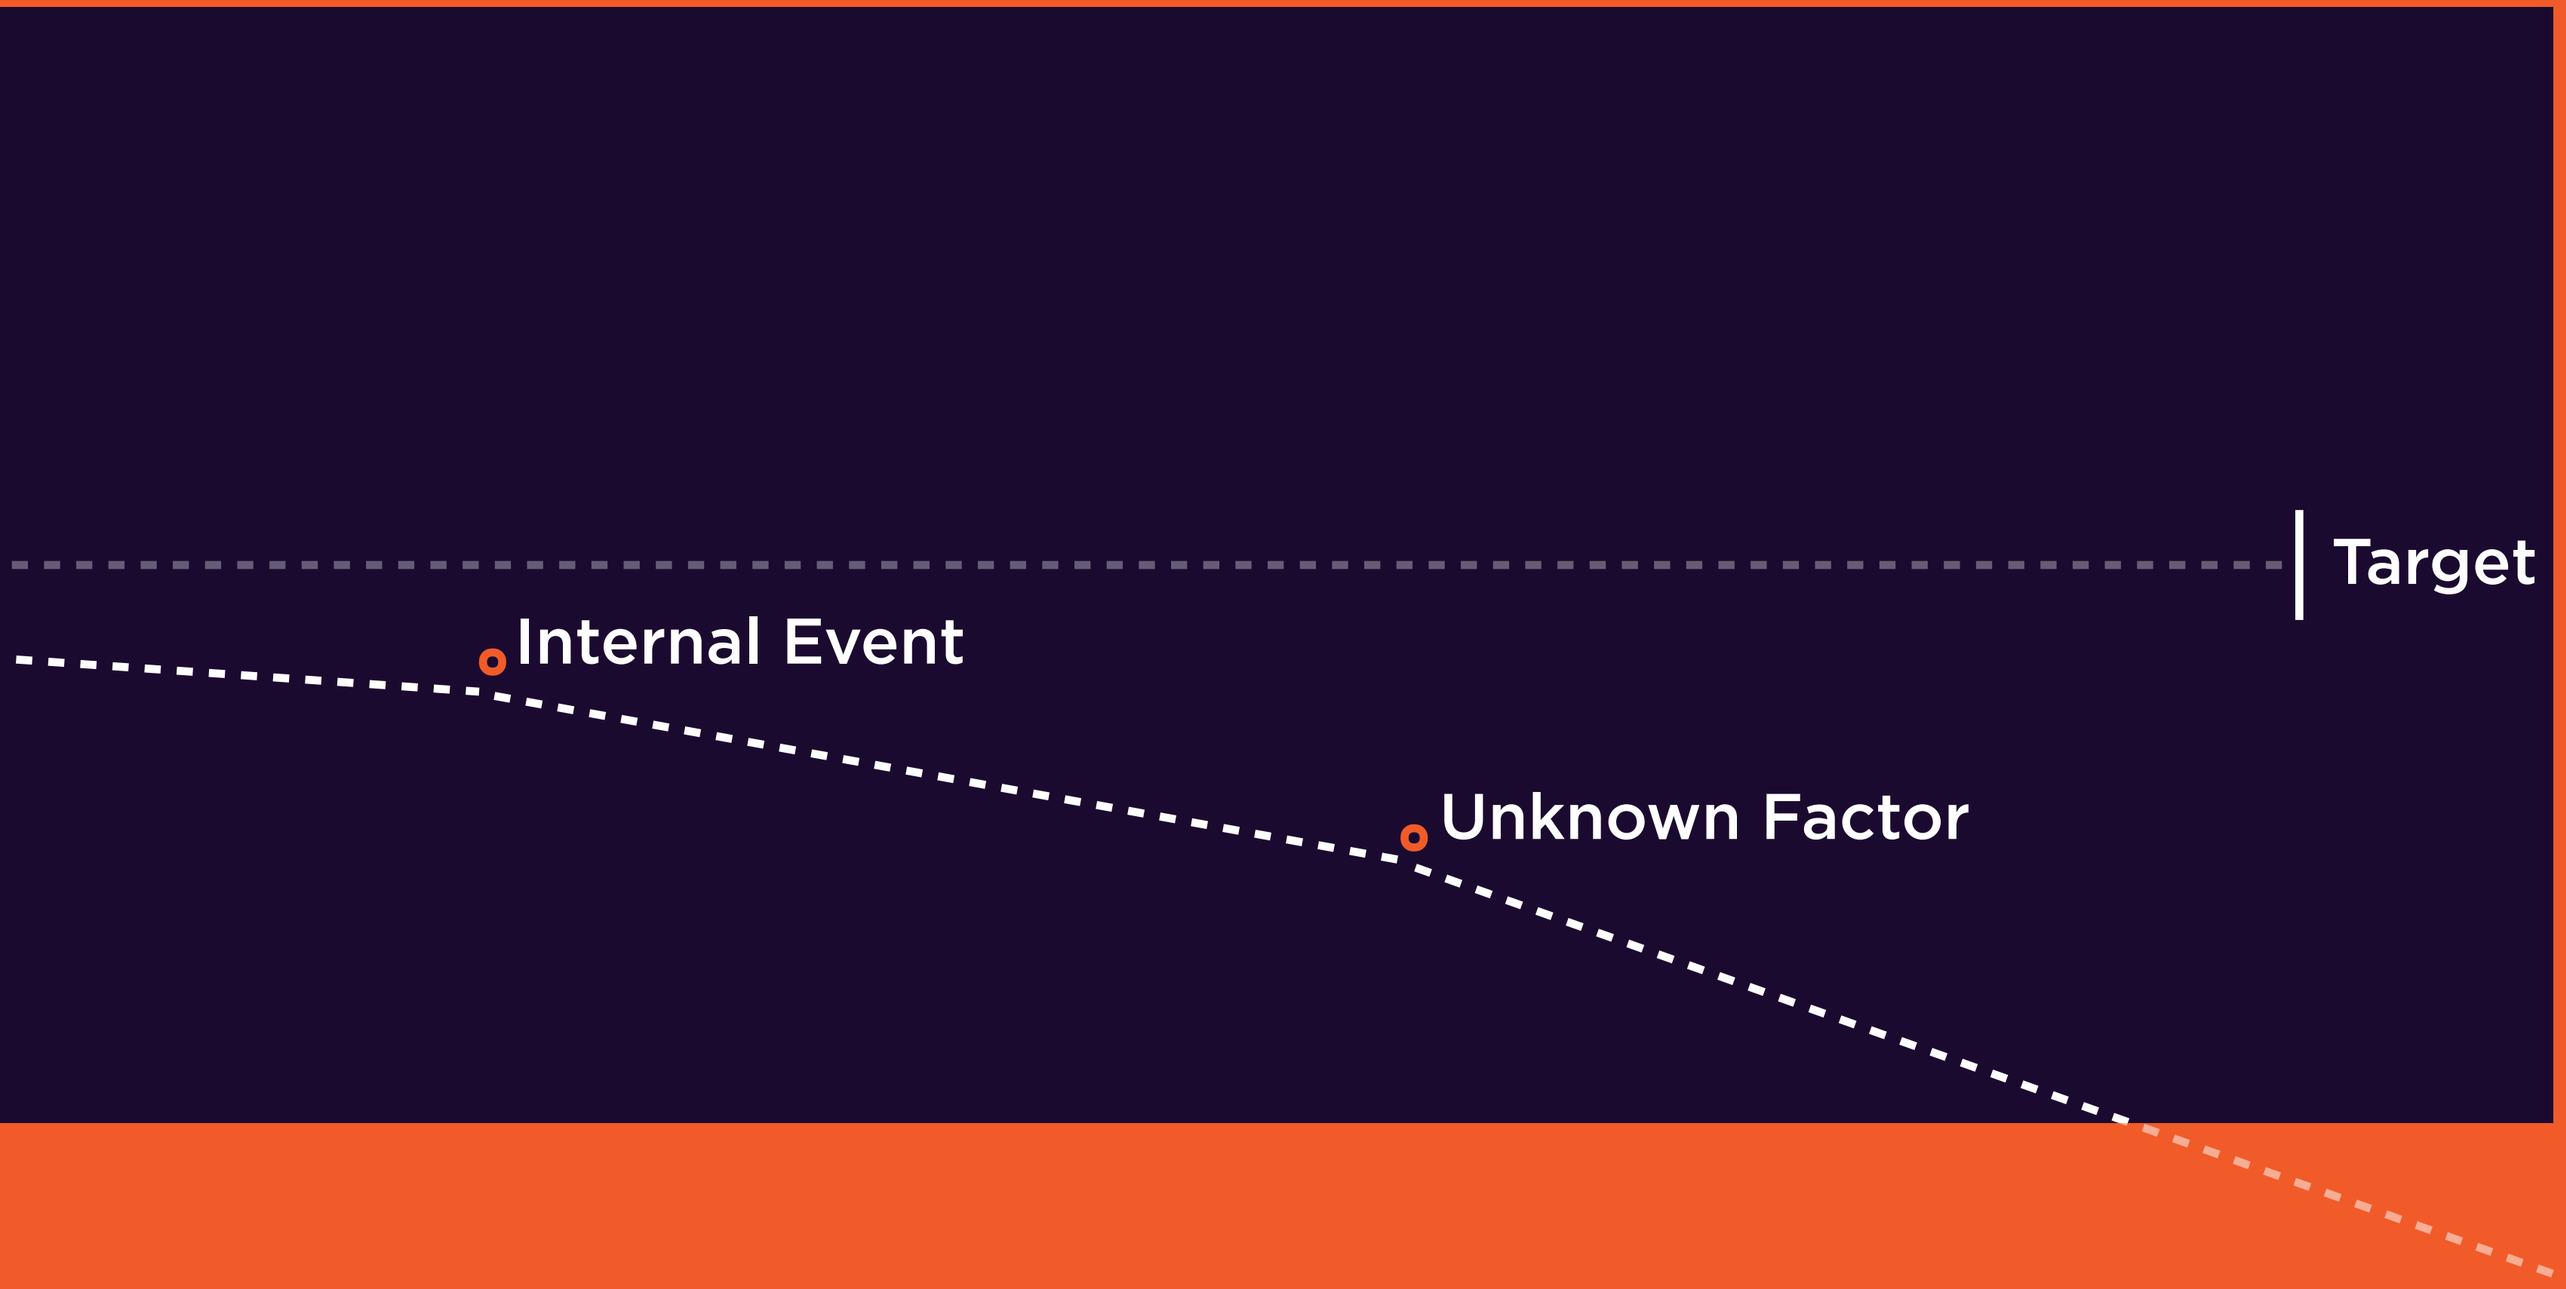

Processes can either facilitate or inhibit our ability to respond to and foment change

Change is the heart of every project

Agility is our ability to initiate and respond to change

Leveraging Change in Agile Projects

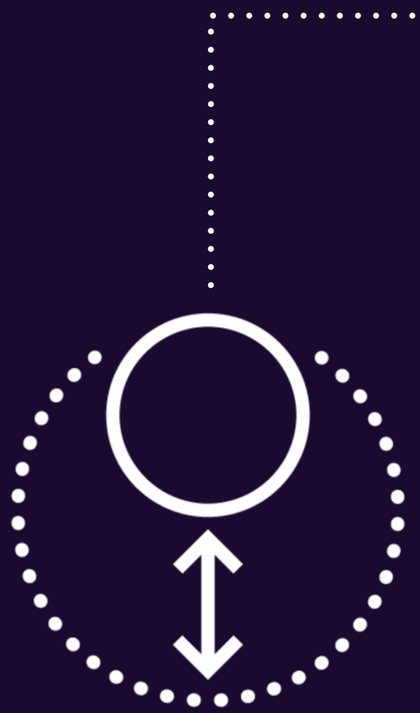

Start
Meticulous Planning
Internal Event

Target
Internal Event
Unknown Factor

Small changes have a compounding effect on plans over time

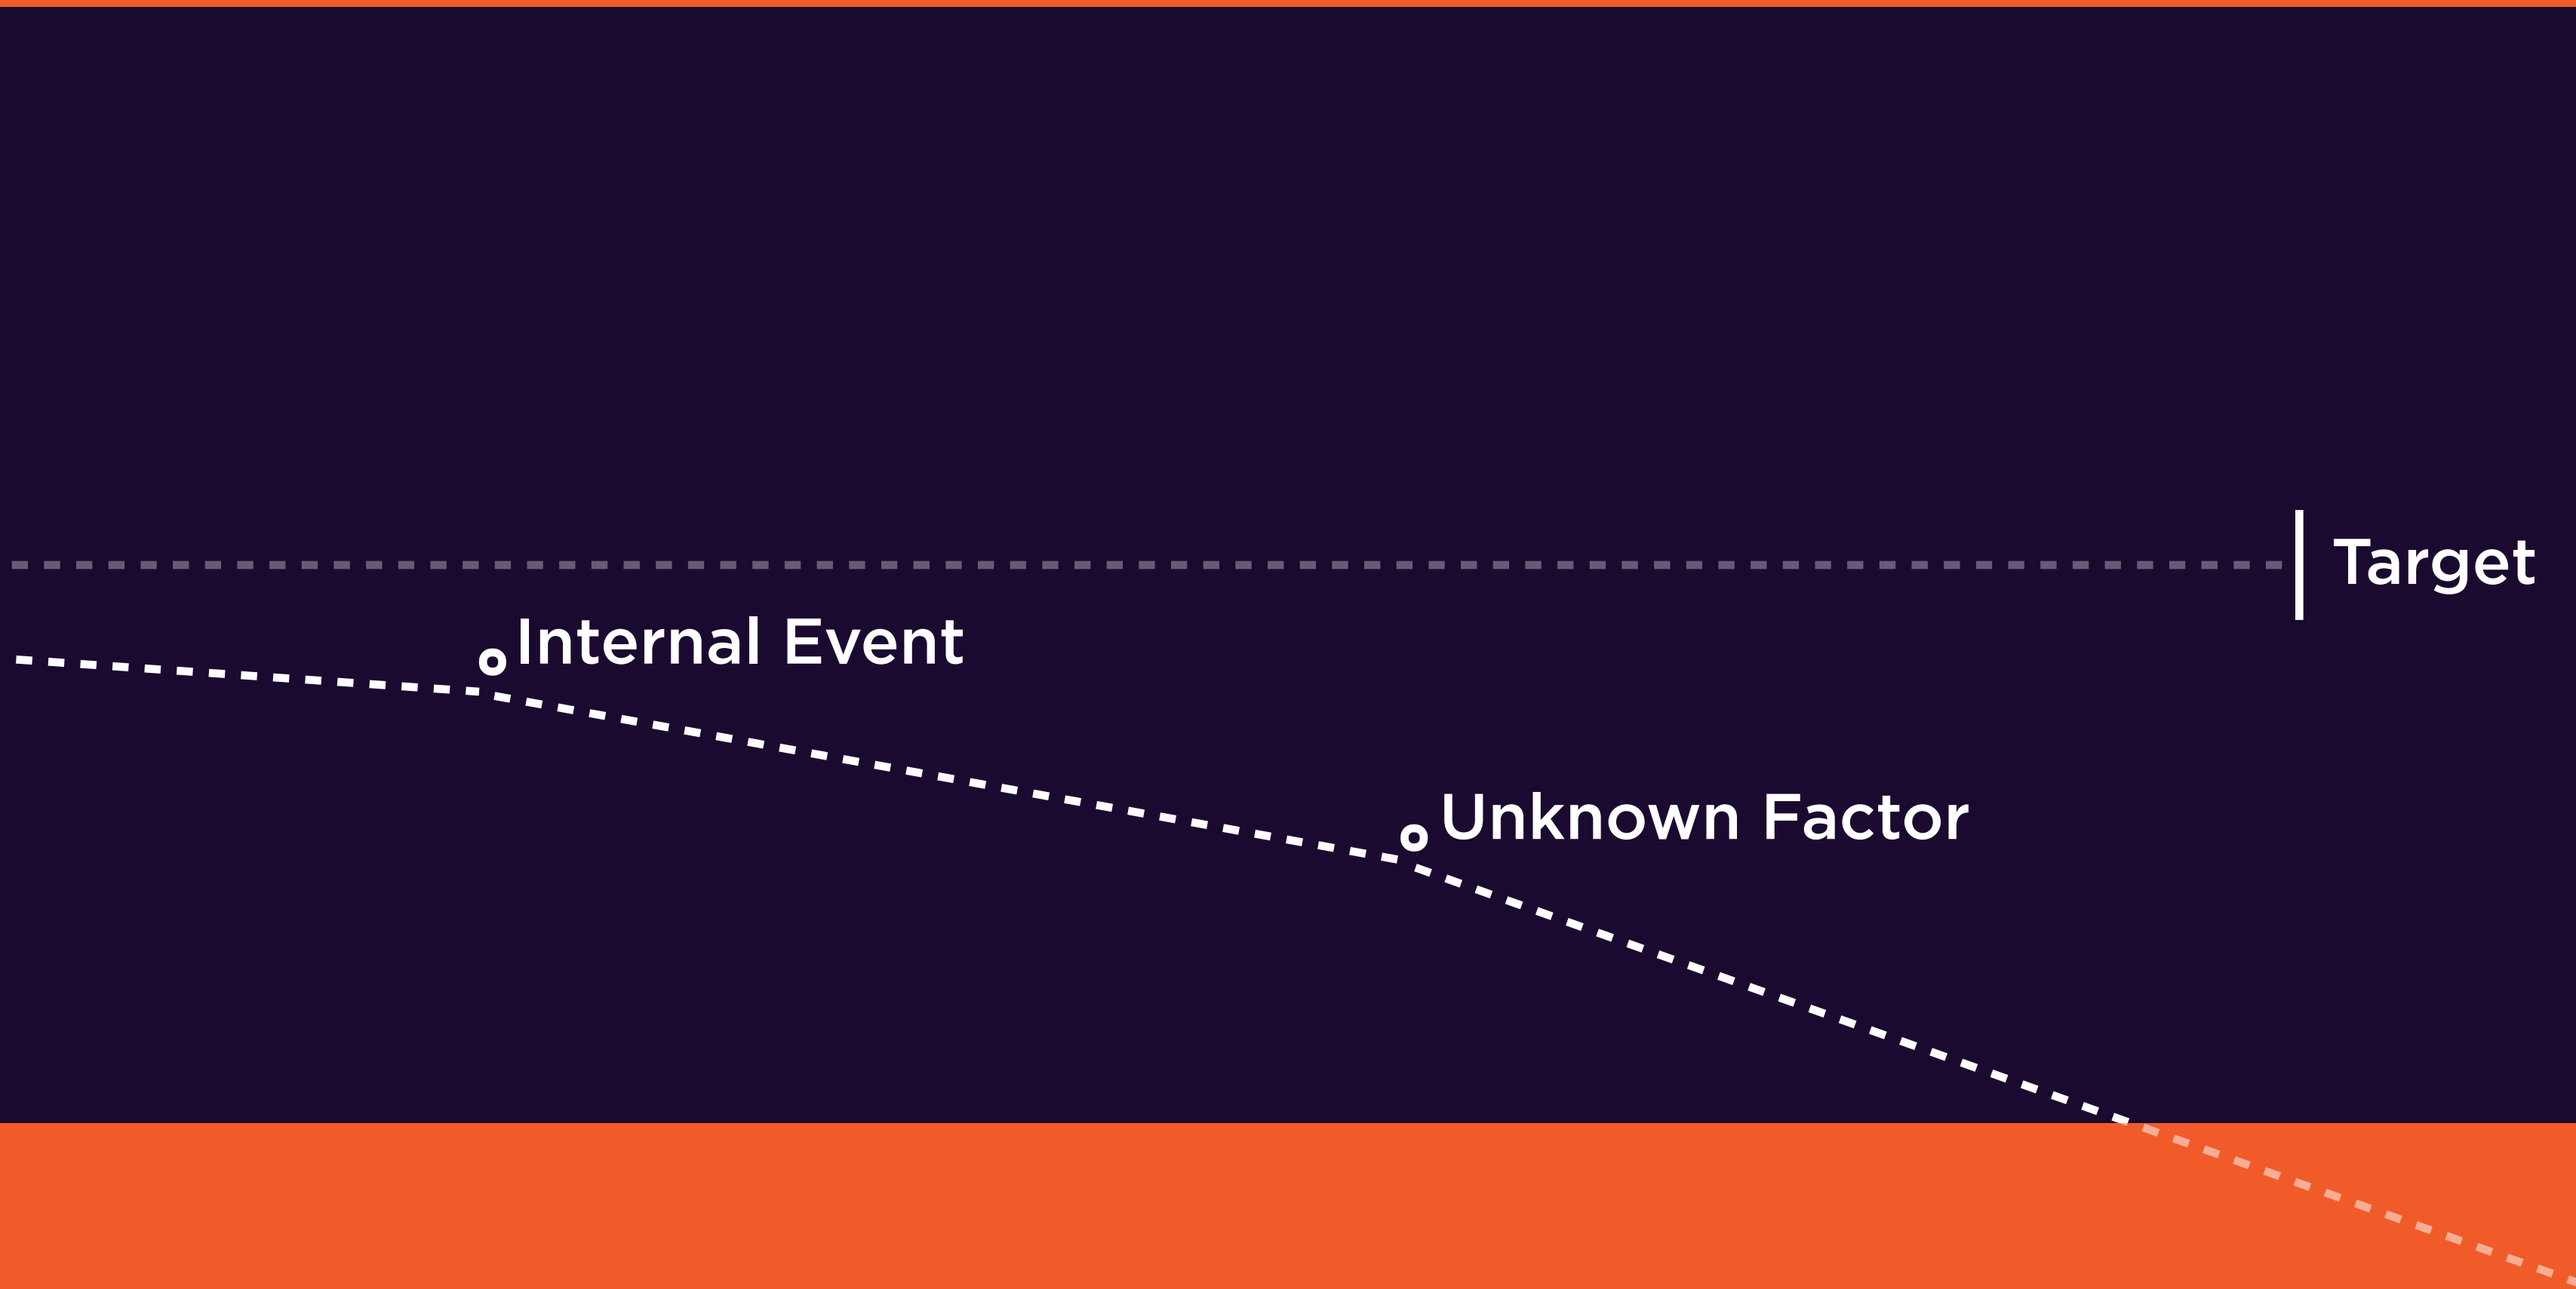

Leveraging Change

- Progressive elaboration
- Just-in-time sprint planning
- Backlog grooming
- Risk reassessment
- Scope reevaluation
- Value reappraisal

Agile allows us to make and respond to changes more quickly

Takeaways

Organizations create value and grow through project initiatives

Agile principles empower project teams to adapt and enhance performance

Traditional focus on processes must be put in perspective when embracing Agile

Takeaways

Predictive projects seek to avoid change through planning

Agile projects embrace change and the opportunities it makes possible

Swift response to change enables project teams to stay on course while maximizing value for beneficiaries
